

Electrostatic Sprayer

A powerful, efficient and cost-effective electrostatic sprayer for disinfection treatment. The electrostatic sprayer features a patented application system, which places an electrostatic charge to liquid disinfectants as they leave the spray nozzle.

- No-touch application to help eliminate cross-contamination
- Uses 75% less chemicals; Saves 50% on the cost of solutions. Droplets are uniform in size, 40 microns, to achieve an optimal coverage and will cover the target surface in 360 degree radius.
- Quiet – 65 decibel noise level
- 4-hour continuous battery life
- Electrostatic droplet / strong adhesion
- Ultra low volume / long endurance
- Shield you from virus

**Provide a Healthier
Environment for Your
Customers and Employees**

Continual High-Level Cleaning Process

Keeping your facility at the highest cleaning standards is crucial to maintaining a safer, healthier environment during The COVID-19 pandemic. Determine how often to clean, what procedure will be used for continual cleaning, what products to use and decide on the best cleaning company for your needs.

Proactive Cleaning Plan Regarding COVID-19 Exposure

COVID-19 is a highly contagious virus that can spread fast. Be ready to quickly mitigate and eliminate any possible new COVID-19 exposure within your facility or workspaces with the right process and cleaning professionals.

How Do I Find Out More About COVID-19 and Re-Opening My Business?

Since COVID-19 is a new disease, new information is continually being released or updated. Here is a list of resources you should bookmark and refer to regularly for the latest facts and recommendations surrounding this disease.

Continual High-Level Cleaning Process

What's My "New Normal" Cleaning Routine During the COVID-19 Outbreak?

You should do routine cleaning daily. You should also set up regular professional disinfecting services on a rolling basis. You'll want to clean all visibly dirty surfaces in your facilities to remove dust and soils – and then disinfect the workspace. The disinfectant will be more effective on surfaces if the dirt, grime, and dust is removed. The frequency of your cleaning scheduling depends on how much public traffic your business gets, and whether you work with vulnerable populations, such as assisted living centers.

Additionally, Make Sure to Focus on High-Touch Areas

Stopping the potential spread of the coronavirus starts with eliminating it in the areas and on the surfaces people in your facility interact with most. High-use areas such as restrooms and entryways should be cleaned on a rotating basis during the day. Focus in on high-touch areas:

- Clean doors, furniture and other objects in entryways and exits
- Frequently wipe down elevator buttons, light switches and light switch plate covers
- Pay extra attention to surfaces people grab such as door handles, cabinet knobs, sink faucets and stair rails
- Continually wipe down shared touch screens, tv remotes, cash registers, ATM touchpads, tablets, computer screens, keyboards, phones, and other electronics with alcohol-based wipes
- Don't forget the tables, chairs, desks in conference rooms, breakrooms, waiting areas and lobbies
- Review the high-touch point checklist on page 6 for more suggestions for your particular business

Schedule Regular Disinfecting Services

When your building is consistently being disinfected, you can reduce COVID-19 exposures before they spread. Frequent disinfecting is a must for businesses that see a lot of foot traffic or are rightfully concerned about controlling viruses such as medical offices and facilities. Use a hospital-grade, EPA-approved disinfectant.
